On **November 15th** the States will debate a new **Policy and Resource Plan**, which will replace the **States Strategic Plan**.

This new policy document outlines the values and vision of the island and will be used to decide what the States will do in the future.

The States Strategic Plan understood that our environment is unique and central to our way of life. Future Guernsey fails to acknowledge this.

If the new plan is accepted without amendment our environment and countryside will be threatened by continued exploitation and development.

We need to contact our States Members and let them know we care about our environment and we want it included in the Policy and Resource Plan.
